

FPS Remote Monitoring System (FPS RMS)

The FPS Remote Monitoring System (RMS) is a web-based, universal platform that helps customers to track, analyze and report on their freezer's performance. Powered by Ignition by Inductive Automation®, the software is licensed by FPS, allowing clients unlimited tags, users and connections, without compromising confidential data.

The FPS RMS provides critical data at your fingertips including:

- + Trends
- + Alarm History
- + Planned Maintenance
- + Report Journals
- + Troubleshooting
- + Operation Manuals
- + Analytics

FPS RMS

Who uses the FPS RMS

Maintenance personnel, plant managers, supervisors and executive management can all have access to the FPS RMS. The system provides customers with critical data-rich information, giving them the power to make decisions quickly based on reporting history and real-time trends.

Why is the FPS RMS important?

The FPS RMS is a system that helps solve customer needs. Not only does the RMS provide customers fast access to vital equipment data, but 24/7 technical support as well.

- + Improved OEE/Capacity/Throughput due to less downtime
- + Improved customer independence helps reduce operational expenses
- + Improved training/maintenance features to support end customers
- + Reduced number of service calls by providing more data insights for end customers
- + 24/7 access to support technicians trained in freezer operations and controls

Data Secure with FPS RMS

Licensed by FPS, all our customers' information is confidential and secure on the platform. Data is transmitted using standard industry communication protocols, strict user authentication, and stored on a secure AWS server on the cloud. This ensures only our customers and FPS authorized personnel are the only people who can access the data from that freezer.
